

Call for papers

ICT and sustainability

You may never have considered attending an ecological economics conference. But now the time has come to try it.

We intend to arrange some sessions on ICT and sustainability at the upcoming ISEE conference, 22 - 25 August 2010 in Bremen / Oldenburg. See <http://www.isee2010.org/>

We plan to submit the session proposal before 30 November. If you would like to join us, either send your abstract to inro@man.dtu.dk or upload it through the special track on the conference website, on 23 November at the latest, 200-400 words.

Concerning the environment, ICT is part of the problem as well as the solution. Whether the positive or the negative impacts come to dominate, depends on the socio-economic and political conditions. The core question is: How should the conditions be formed to realize the positive potentials and restrict the negative impacts? It is easy to say that we need a higher energy price, but we may be able to come up with more elaborate suggestions, based on thorough studies on ICT.

We would be happy to see contributions on a wide range of topics related to ICT:

- case studies on environmental impacts
- modelling environmental impacts of ICT
- the rebound effect of ICT
- green ICT business models and innovation strategies for green ICT
- greening everyday life
- transformation of energy systems, transportation etc. with ICT (Green through ICT)
- regulation of ICT markets in an environmental perspective
- innovative political approaches for promoting Green ICT
- and many more

If we succeed in attracting interesting contributions, we plan to edit a special issue of a relevant journal.
